Course Syllabus
CS-220: Computer Systems II
Spring 2017

Credits /Contact Hours 4 credits, Three 60 minute lectures and one 85-minute lab per week

Instructor:  Tom Bartenstein  E-Mail:  [mailto:tbartens@binghamton.edu](mailto:tbartens@binghamton.edu)

Office Hours: See class Web Page.

Textbooks

Computer Systems: A Programmer’s Perspective, Third Edition, Randal E. Bryant and David R. O’Hallaron, Prentice Hall. (There will be no specific reading assignments, but each lecture will identify the associated relevant sections of the text. Read these sections before the lecture to prepare for the lecture, and/or after the lecture to get a different perspective on the material.)

Supplementary Text: The C Programming Language, Second Edition, Brian Kernighan and Dennis Ritchie, Prentice Hall, 1988. (I strongly recommend that you purchase your own copy of this textbook and keep it even after this semester. This book will serve you your entire career as the single most useful and important reference book on the C language.)

Course Description The architecture and programming of digital computers. Data representation. Processor, memory and I/O organization. Instruction set architectures, encoding and addressing modes. I/O techniques. Interrupts. Assemblers, macro-processors, compilers, interpreters, linkers, loaders. Assembly and machine language programming. C programming language constructs (control and data structures, pointers, arrays and functions) and their relationship to the underlying architecture. Supervised laboratory work involves programming and debugging using machine language, assembly language and C.

Prerequisites

Pre-requisite: CS-120 COMPUTER SYSTEMS I: MACHINE ORGANIZATION

Pre-requisite: CS-140 PROGRAMMING WITH OBJECTS
**Required for Major:** Successful completion of CS-220 is required for a Computer Science major

**Course Objectives** Upon completion of this course students will understand:
- how to write application software.
- how to develop software using C.
- implications of other CS topics (architecture, languages, operating systems, algorithms, etc.) on application development.

**Main Topics**
- Binary Integer and Floating Point Arithmetic
- C syntax, declarations, operators, control structures, arrays, pointers, etc.
- C compilation, link edit, and load
- X86 ISA and X86 assembler and Object code
- X86 64 bit Calling conventions
- Heap management
- Buffer Overflow attacks
- Time Slicing and Resource Sharing
- Introduction to asynchronicity in Software
- Virtual memory and Cache Memory

**Lecture Notes**
Lecture Notes for each lecture will be posted on the class web-site in PDF format before lectures. *Lecture notes do not substitute for class attendance,* since (i) they will not be complete and (ii) significant parts of lectures, including discussions and in-class exercises, may not come from the class notes.

**Grading**
Your grade will be based on:

<table>
<thead>
<tr>
<th>Component</th>
<th>Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pop Quizzes, Attendance, Class Participation</td>
<td>10%</td>
</tr>
<tr>
<td>Homework</td>
<td>10%</td>
</tr>
<tr>
<td>Labs</td>
<td>10%</td>
</tr>
<tr>
<td>Projects</td>
<td>30%</td>
</tr>
<tr>
<td>Tests (2 tests 10% each)</td>
<td>20%</td>
</tr>
<tr>
<td>Final Exam</td>
<td>20%</td>
</tr>
</tbody>
</table>
Most of the components of your grade will appear on blackboard, but your final average will include components that are not published. The mapping from a numeric average to a letter grade is not pre-defined, but will be determined by the instructor once all averages have been computed, based on class performance and comparison to previous CS-220 classes.

**Participation** Formal attendance will not be taken for each lecture or lab, but attendance is expected. There will be several un-announced quizzes administered throughout the semester during lecture or lab periods. Unexcused absence from a quiz will result in a zero grade for that quiz. If you cannot attend a lecture or lab, e-mail the professor *before* the lab or lecture, and make sure you consult with the professor or TA during office hours afterwards to ensure you know what you missed. Your participation grade will include an average of the quiz grades, where the numerator is the sum of the quiz grades you received, and the denominator is the number of *unexcused* quizzes given. Another component of the participation grade will be the professor’s subjective evaluation of participation, including the number of times you answer/ask questions in class and lab, and the number of times you ask for extra help during office hours.

**Homework** Short homework assignments will be posted on the class web page approximately a week before homework is due. The assignments should not take a long time (about an hour). Answers will be reviewed in class after the due date, and posted on the class web page. Late homework, turned in after the deadline, will get an automatic 50% deduction. Homework will not be accepted after the answers have been reviewed in class. Homework grades and feedback will be posted on Blackboard as soon as your submission has been graded.

**Labs** Lab instructions will be posted on the class web page prior to the start of the first lab section. Either the TA or the Professor will be available to answer questions during the lab period. You are encouraged to work together during labs, but may work on your own. If you work as a team, make sure that every member of the team understands the lab material! Material covered in the labs will appear on quizzes, tests, and the final exam. Lab grades will be posted on Blackboard once they are available.

**Projects** There will be four long-term programming/debugging projects assigned throughout the semester. The lowest project grade will be dropped, and the remaining three will be averaged. The instructions for each project will be posted on the class web page. Each project will require a significant time to complete. Please get started on these projects early – if you wait until a week before these projects are due, you will not get good grades! Project assignments will be graded on the CS
LDAP accounts, so please test them there. More specific submission and grading instructions will be included in the project instructions. Late projects will result in a 10% deduction for every day the submission is late.

**Tests** Tests will be in class, closed notes, and closed book, unless otherwise specified (unlikely). The first test will take place near the beginning of March, the second, near the middle of April. You must complete the test in the time given. Unexcused absence from the test will result in a zero grade for that test. Test grades will be posted on Blackboard as soon as they are available.

**Getting Help** Please utilize the instructors and TA’s office hours for questions and discussion of course related material. Our job is to make you successful, and office hours are a great way to get help. E-mail the instructor or TA’s if you need an appointment outside of office hours, or e-mail questions or discussions to the professor directly.

**Partial Credit** We commonly give partial credit to partially correct answers in this course. For that reason, it is always recommended to show your work in developing a solution for homework, test questions, lab questions, and projects.

**Academic Honesty Expectations**

Please review the academic honesty document and make sure that you understand it! The link is at: [https://www.binghamton.edu/watson/student-services/advising/undergrad-forms/honesty-policy.pdf](https://www.binghamton.edu/watson/student-services/advising/undergrad-forms/honesty-policy.pdf). Cheating and copying will NOT be tolerated. For instance, any code turned in will be compared to other students’ submissions. If there is significant similarity, even if there are different variable names or comments, all such similar code will receive a zero grade.

**Collaboration** Students are encouraged to help one another and to form study groups. In Computer Science, you can learn more from your peers than from your instructors and teaching assistants. As long as the help is appropriate, please be generous with your time and expertise when helping fellow students. Doing so is good for you and good for them. You are free to discuss assignments in general terms with one another. However, please do not share your work directly to other students. Each student must complete your assignments individually (unless indicated otherwise by the instructor). Each of you must write your own code, and you must write up all solutions individually. Students submitting solutions (including code) that are determined to be “too similar” are likely to be punished equally and harshly.

**Academic Stress:** If you are experiencing undue personal or academic stress at any time during the semester or need to talk with someone about a personal problem or
situation, I encourage you to seek support as soon as possible. I am available to talk with you about stresses related to your work in my class. Additionally, I can assist you in reaching out to any one of a wide range of campus resources, including:

1. Dean of Students Office: 607-777-2804
2. Decker Student Health Services Center: 607-777-2221
3. University Police: On campus emergency, 911
4. University Counseling Center: 607-777-2772
5. Interpersonal Violence Prevention: 607-777-3062
7. Office of International Student & Scholar Services: 607-777-2510
