Discussion Questions for "Java Arrays"

1. We described how an "enhanced for" loop works for arrays. Can you think of other data structures that would also benefit from enhanced for loops? What needs to be true about a data structure to make an enhanced for loop work?
2. How would you change the code in the minBalance method to:
   a. Return the minimum balance instead of the account with the minimum balance? (Hint: if there is no minimum balance, this should return infinity.)
   b. Return the account with the maximum balance instead of the minimum?
   c. Return the average balance?
